

Digital Transformation in Municipal Revenue Management

Capital
Digital

01.

Origin of the Project and Objectives

Framed in the Digital Transformation Strategy of the Madrid City Council.

02.

Digital Transformation in Municipal Revenue Management

Business Capabilities of SAP Tax and Revenue Management

Increase collections and maximize taxpayer compliance with unified contribution, revenue, and tax management

Taxpayer Digital
Services

Simplify taxation by enabling digital interactions between taxpayers and tax agencies.

Taxpayer Registration
and Partner
Management

Streamline the registration of central taxpayer accounts and management of third parties.

Taxpayer Returns and
Assessments

Improve accuracy and efficiency by managing the entire lifecycle of tax returns and assessments.

Receivables
Management and
Payment

Manage receivables, payments, and high-volume financial transaction reporting with SAP S/4HANA.

Credit and Collection
management

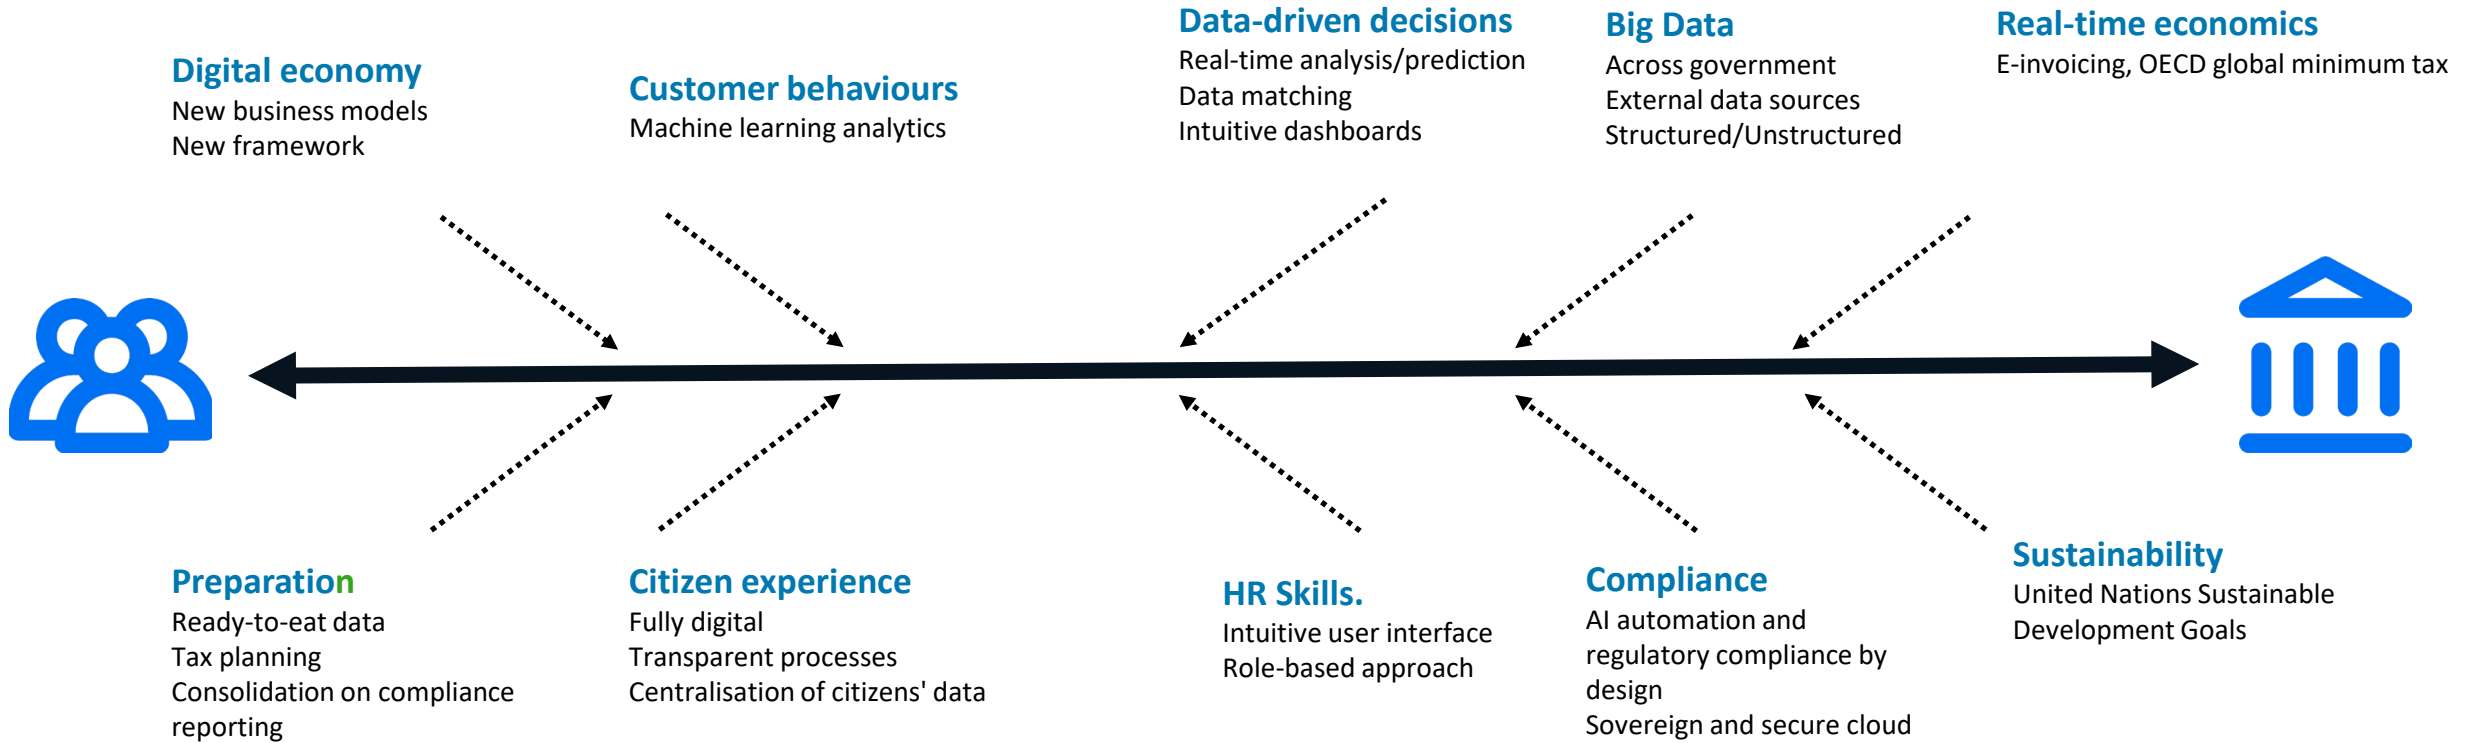

Tailor credit decisions and collection management processes to customer profiles with SAP S/4HANA.

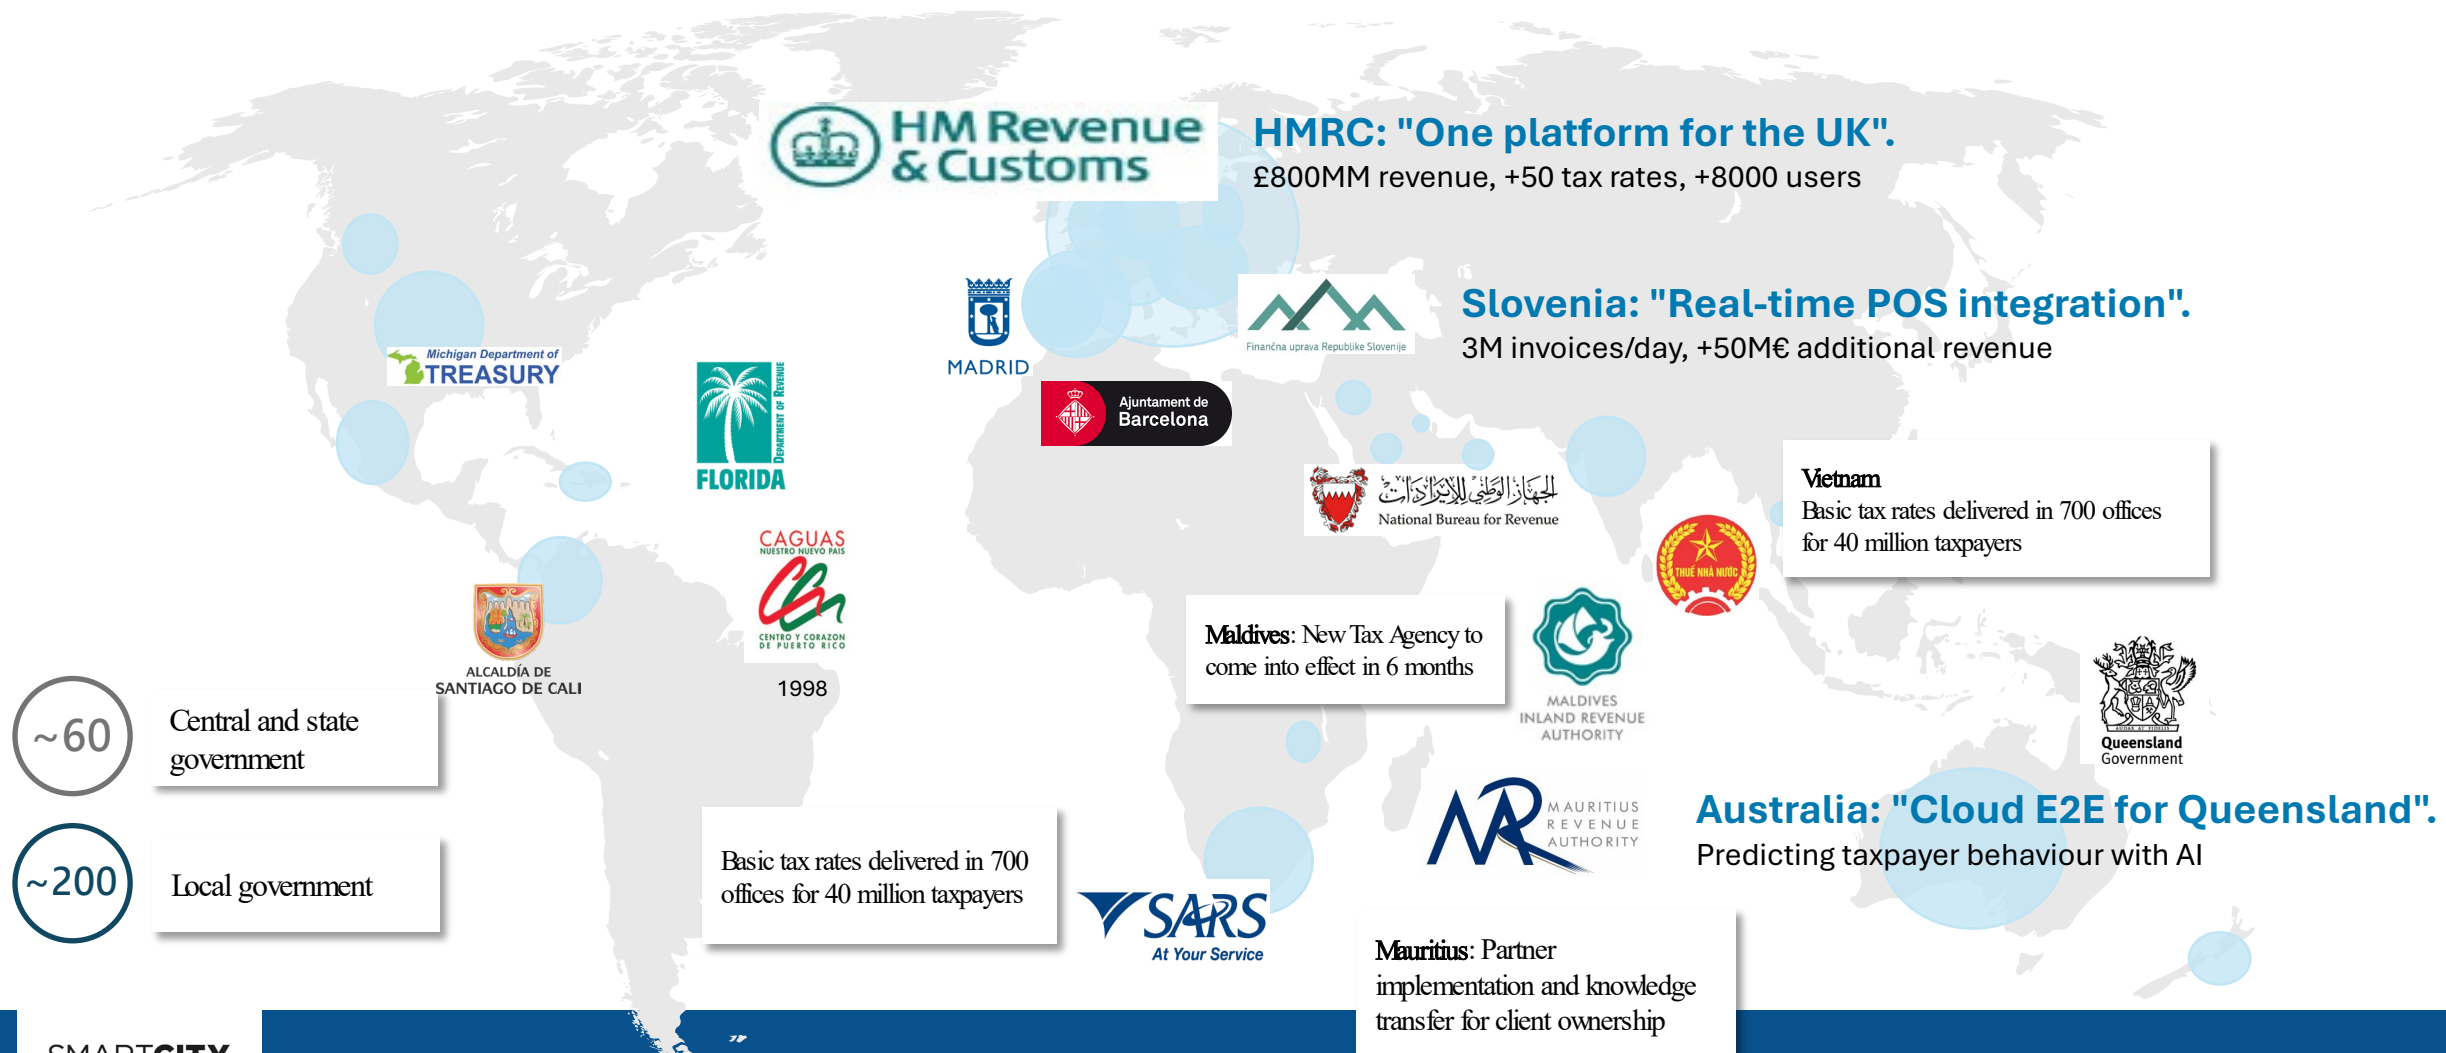

Risk and compliance

Improve risk and compliance with real-time collaboration across different business areas within a tax agency.

Evolution of SAP TRM: Tax Administration 3.0

SAP Tax and Revenue Management - Customer base

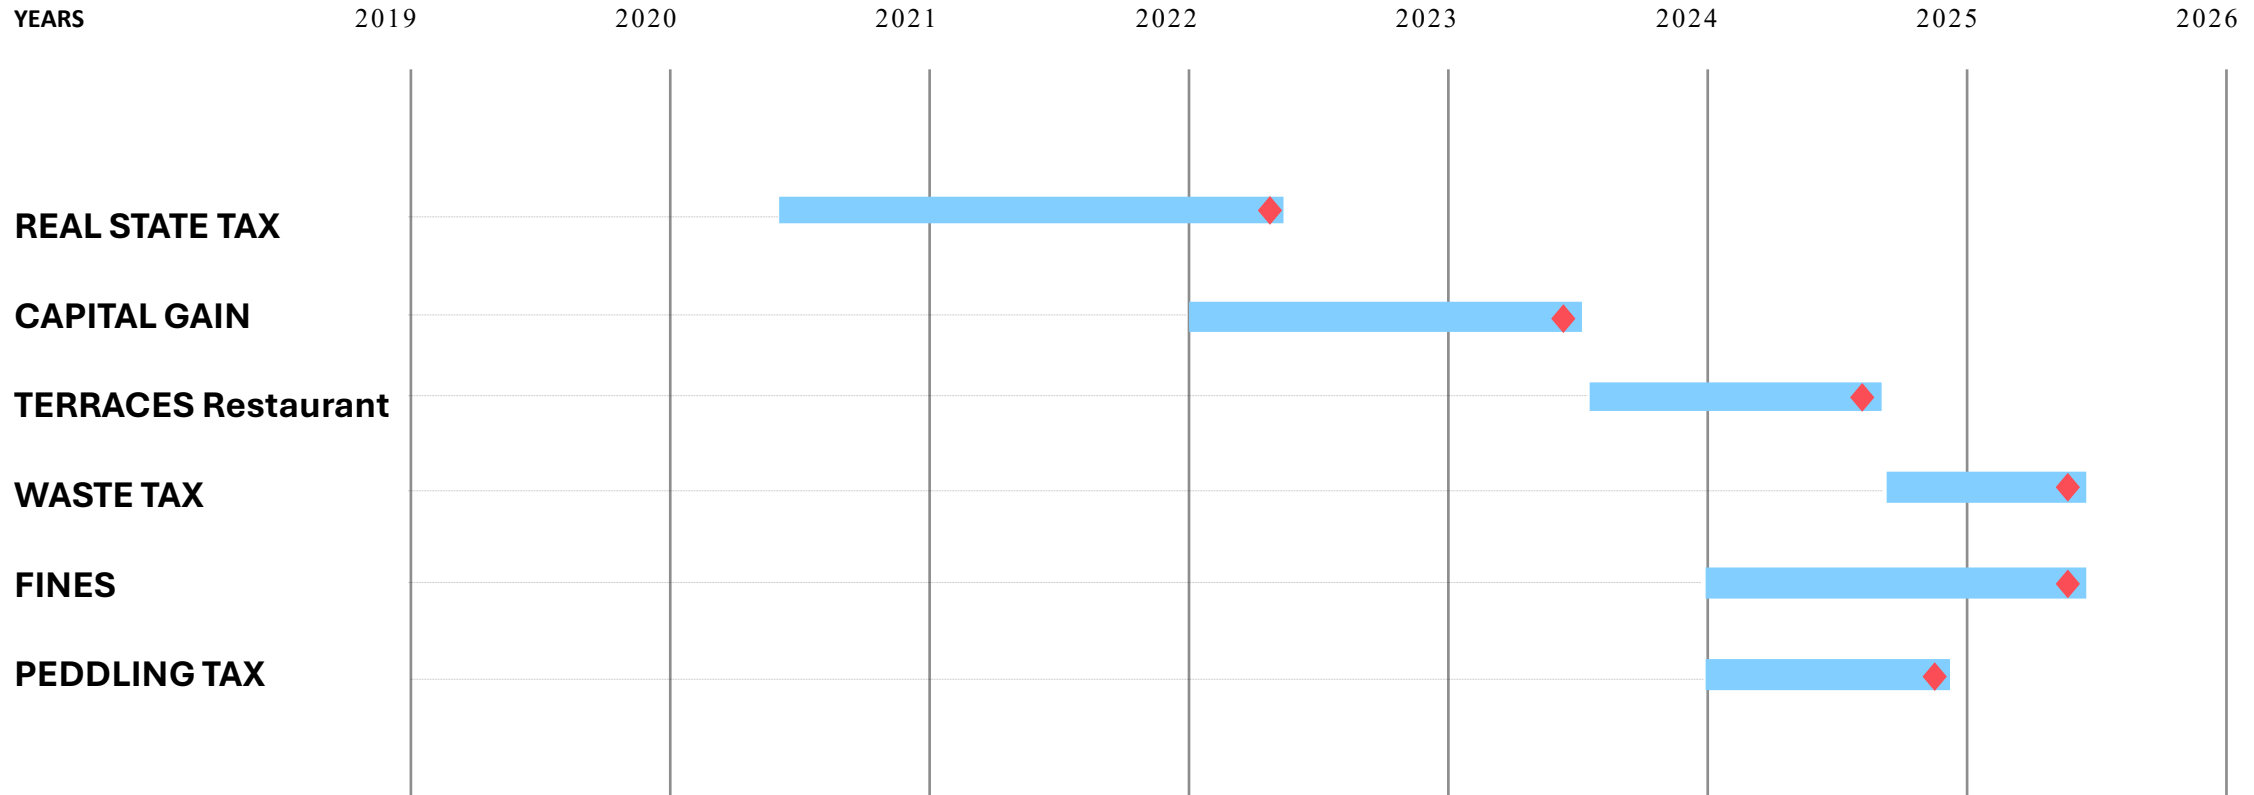

~60 Central and state government

~200 Local government

Basic tax rates delivered in 700 offices for 40 million taxpayers

Mauritius: Partner implementation and knowledge transfer for client ownership

PROJECT PLAN

OUR PLATFORM IN NUMBERS

The main taxes have been incorporated into this platform: taxpayers and collection

Waste Rate

1,7M taxpayers

296M €

Restaurant Terrace Rate

5.389 taxpayers

12M €

Capital Gain Tax

146.000 tradings

400M €

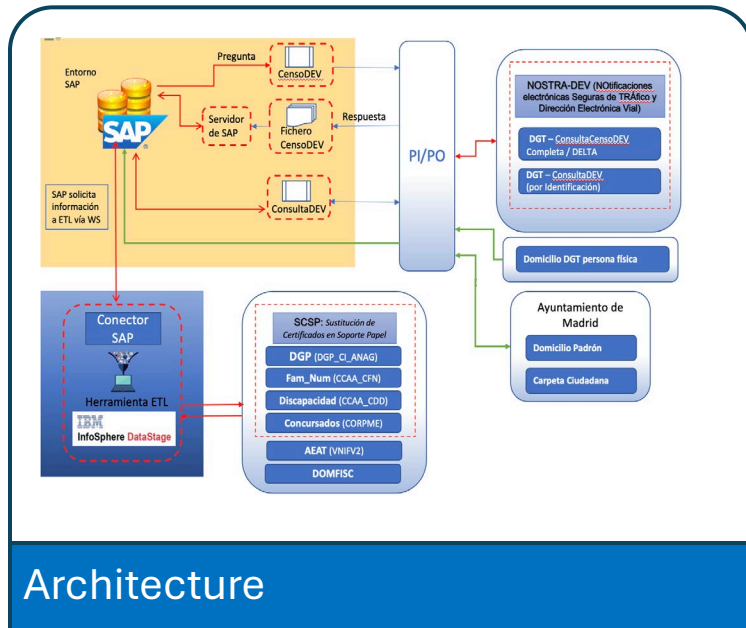

IBI (Real State Tax)

2,2M taxpayers

1514M €

DATA QUALITY

One área of this Project, includes data quality, which translates into improving the identification of taxpayers. A series of mechanisms have been defined in the registration and continuous operational management of the system that allow obtaining a Golden Record. Golden Record are those records correctly identified and verified against a validating source.

Architecture

5.000.000 Golden Records, verified against different sources like Police, Notaries or AEAT (Spanish Tax Agency)

Results

All registrations that are currently given as part of operational management, whether manual or through integration with third parties (cadastre, police, notaries, etc.) have the same identification mechanisms.

Continuous Quality

Results

- 360° vision of a taxpayer at Madrid City Council to offer proactive and quality services
- Data quality and governance as an essential element of the system for better tax collection.

Single view of the taxpayer and data quality

- Multiple automated actions that allow a faster and 24/7 relationship with the citizen.
- Simplification of processes to reduce burdens on citizens through ex officio procedures and proactive action by the administration.

Simplification

- 100% digital filing and processing, with electronic communication and notification.
- New multi-device digital services for 24/7 digital channel interaction with the taxpayer

Digital

- Process orientation of the system and users, homogenising the way all departments work.
- Proactive processing aids for greater efficiency.

Efficiency in management

ATM Strategic Plan - Line 2: Implementation of the Digital Transformation Model

The transformation of the tax system involves reducing the obsolescence of current systems in order to have modern and efficient tools that allow for the improvement of tax collection and the redefinition and simplification of relations with citizens through digital channels.
